

Phone**Gap**

React

Vue.js

Frågor innan vi drar igång?

Road to Heaven

Dagens agenda

- Native vs. Webbapplikationer?
 - Hybridapplikationer
 - PhoneGap (Cordova)
- Moderna ramverk för webbutveckling
 - Vue.js
 - React

Att bygga applikationer med webbtekniker

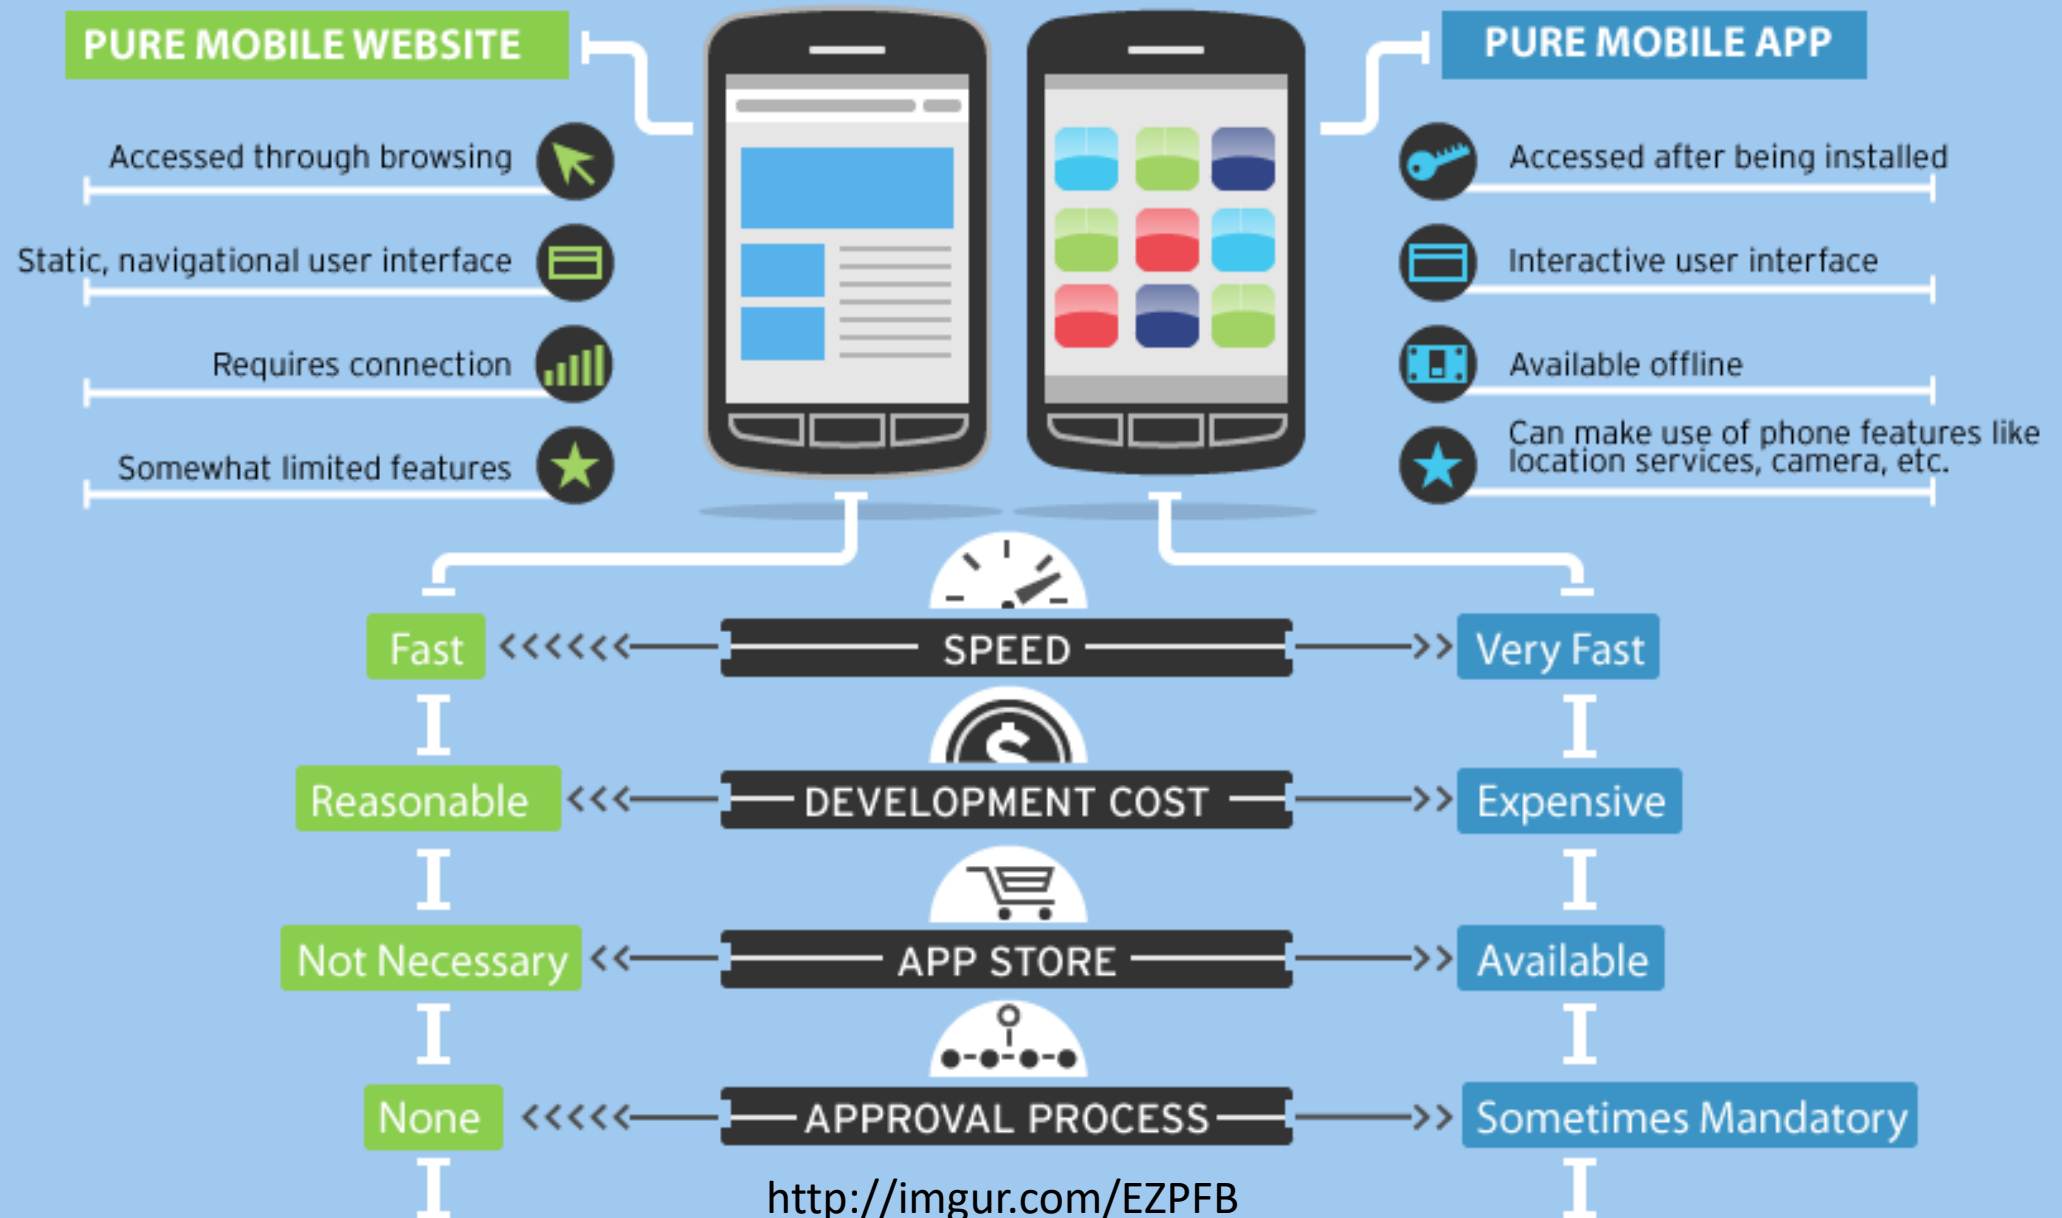

HTML / CSS / JS / m.m.

**Vilka för- och nackdelar finns det med
webbapplikationer och nativa applikationer?**

SOME BASIC PRINCIPLES

Native Apps

Average user spends
2 hrs. 19 min. /day

— VS —

Mobile Web

Average user spends
22 min. /day

Pros

Not required

Incorporates and works
with all smartphone tools
(ex. Camera, GPS, ext.)

Fastest & most optimum performance

Included in app stores, which makes it
easier for users to discover apps
whether they were seeking it or not

More popular with consumers

App is downloaded to device

Cons

Needs additional marketing strategy

High competition from other apps

Takes longer to develop & cost more

Internet Connection

Smartphone Tools

Performance

Marketing

Cost/ Time

Required

Does not incorporate all tools
(ex. Camera, GPS, ext.)

Not universally compatible.
May not work properly on certain
devices or older devices

Not listed in app store, making
discovery more difficult

One browser makes it easier to reach
a wider audience faster

Typically less expensive to develop,
and require less development time

Cons

Pros

Vilka är era topp 3 applikationer?
(som inte är förinstallerade)

Hybrid App

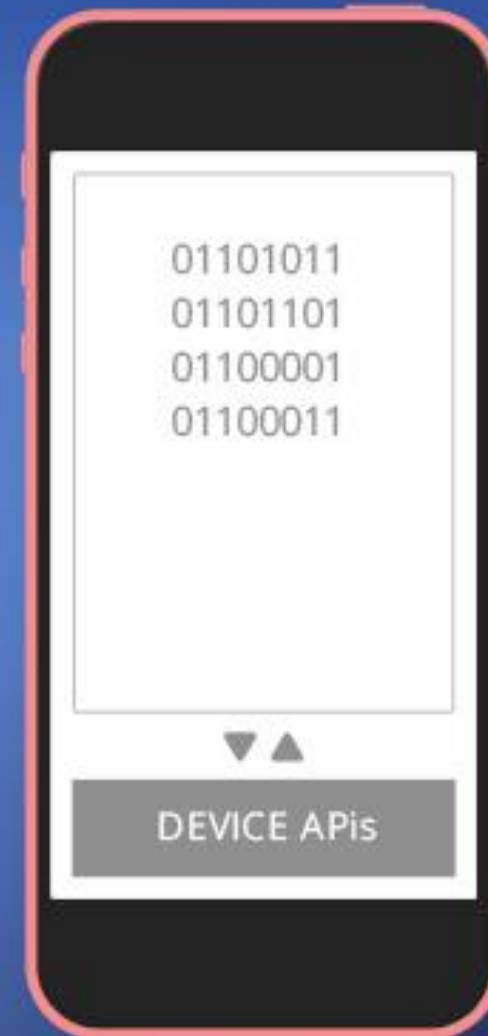

MOBILE WEB

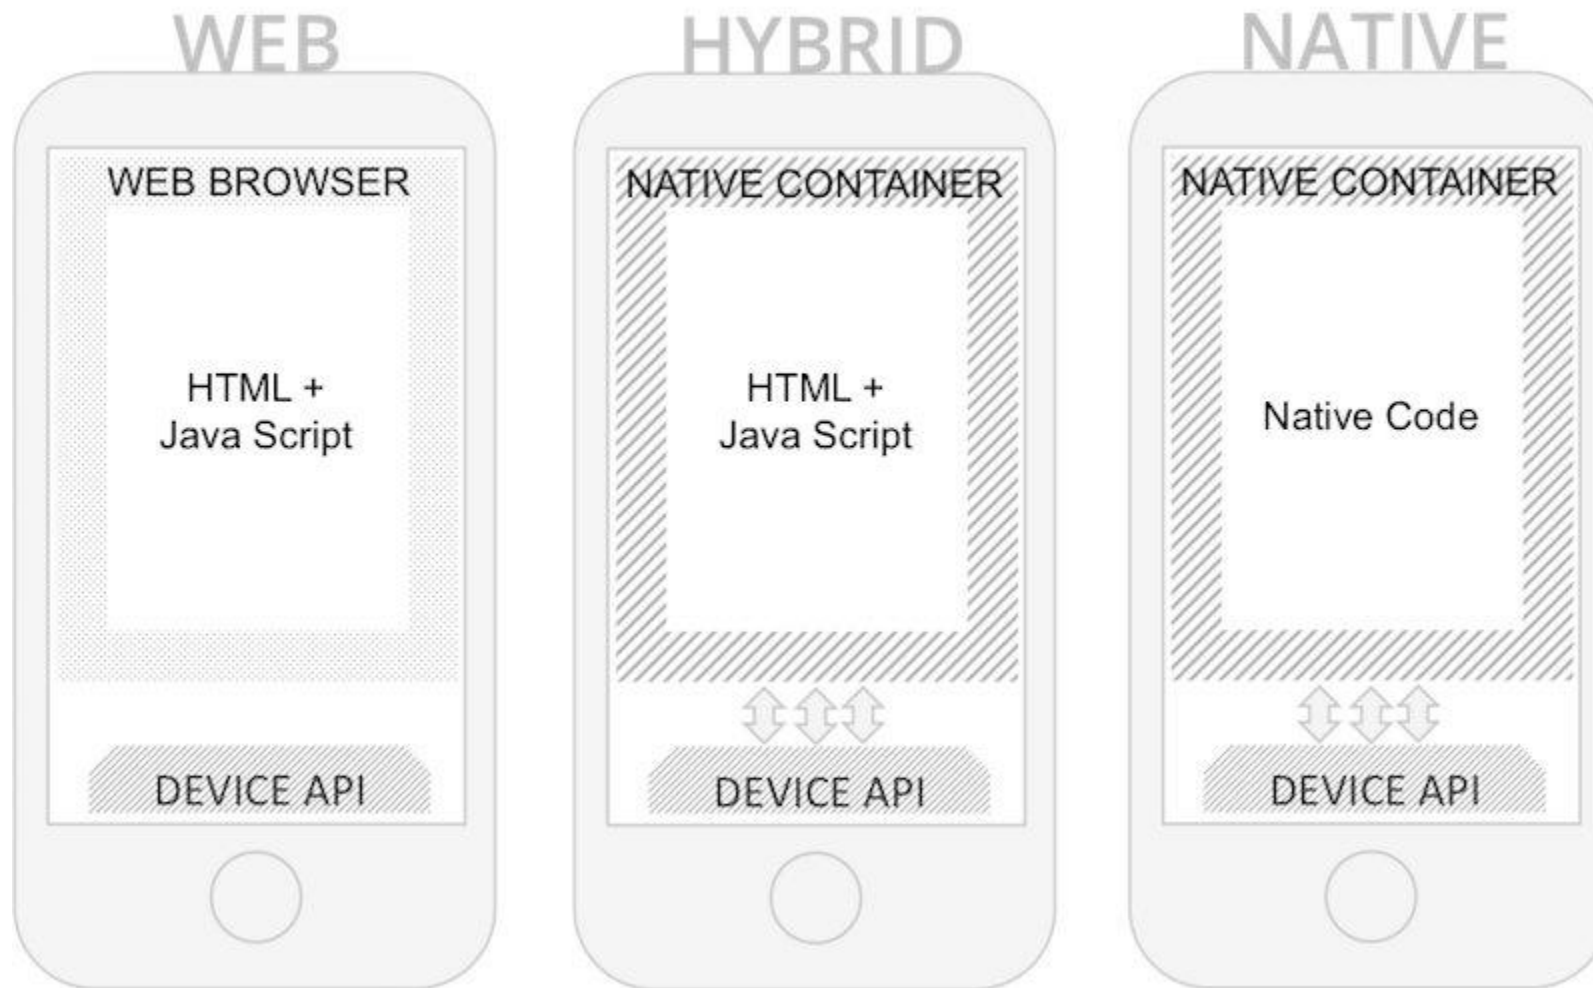

HYBRID NATIVE

PURE NATIVE

Development Options

FEATURE	 WEB APP	 HYBRID APP	 NATIVE APP
Code Bases	1	1	Multiple
Server Side Updates	Yes	Yes	No
Web Technologies	Yes	Yes	Limited
Responsive Design	Yes	Yes	No
Touch Gestures	Yes	Yes	Yes
Feels Like App	No	Yes	Yes
Native Functionality	Limited	Yes	Yes
Performance	Moderate	Moderate	Fast
Offline Capability	Moderate	Yes	Yes
User Experience	Limited	Moderate	Full
Development Cost	Minimal	Moderate	High
Development Process	Fast	Moderate	Slow
Difficulty Level	Easy	Advanced	Very Difficult
App Store Deployment	No	Yes	Yes

Saker att tänka på vid hybridappar

- HTML5 is NOT better than native, but it rarely matters
- It is possible to create iOS applications without a Mac
- You need to use a HTML5 framework, and you need to choose a good one
- HTML5 (hybrid) can do EVERYTHING native can do
- The DOM is the biggest determining factor for performance
- Debugging is sometimes awesome, sometimes difficult

Vilka appar är hybridappar?

Verktyg för att skapa hybridappar?

Download Xamarin.

Xamarin turns you into a multi-platform mobile developer virtually overnight.

[Download now](#)

Xamarin apps look and feel native because they are.

Native User Interfaces

Xamarin apps are built with standard, native user interface controls. Apps not only look the way the end user expects, they behave that way too.

Native API Access

Xamarin apps have access to the full spectrum of functionality exposed by the underlying platform and device, including platform-specific capabilities like iBeacons and Android Fragments.

Native Performance

Xamarin apps leverage platform-specific hardware acceleration, and are compiled for native performance. This can't be achieved with solutions that interpret code at runtime.

Build great mobile experiences faster

Native apps. Mobile APIs. Real-time analytics. **One Platform.**

Cordova Plugins

Search 1599 plugins...

What is a Cordova plugin?

A plugin is a bit of add-on code that provides JavaScript interface to native components. They allow your app to use native device capabilities beyond what is available to pure web apps.

[+ Contribute Plugins](#)[? Plugin Help](#)

Must Support Platform(s):

Android	iOS	Windows	Blackberry	Ubuntu	Firefox OS
macOS	WP8	Browser

Tankesätt

1. - Vi utgår att våra filmer sparas i en array
2. Strukturera upp bra HTML-kod
3. Ange id:n för de element som vi behöver
 1. Textfältet för ny filmtitel
 - #new-movie
 2. Knappen för att lägga till en ny film
 - #add-movie
 3. Listan för att visa upp alla filmerna
 - #movies
4. Skriv funktionerna i JavaScript
 1. `$("#add-movie").on("click", function() { ... });`
 2. `renderMovies();`

A geek with a hat

React+Flux can do in just 137 lines what jQuery can do in 10

XKCD Automation

I waste almost 15 minutes a week on an annoying little task. Every email I send to an email list gets a link that says, "Click here to share with a friend."

Clicking the link opens a filled-in email message. Add an address or

Varför Vue eller React – jQuery funkar ju!

- Snabb rendering av sidor genom virtuell DOM
- Komponentbaserat
- Rendering på serversidan
- Enkla integrationer med olika routing-verktyg
- Stort community och mycket support
- Bättre struktur för större projekt

Function as a Service Platform and Library

The fastest way to share code

Approachable

Already know HTML, CSS and JavaScript? Read the guide and start building things in no time!

Versatile

An incrementally adoptable ecosystem that scales between a library and a full-featured framework.

Performant

20KB min+gzip Runtime
Blazing Fast Virtual DOM
Minimal Optimization Efforts

Vue.js

- Ett JavaScript-ramverk för att bygga grafiska gränssnitt
- Fokuserar på " View" -lagret (man pratat ofta om **MVC**)
- Enkelt att integrera med andra bibliotek

Fördelar

- Enkelt att lära sig!
- Lättviktigt
- Snabbt
- Reaktivt
- Virtuellt DOM
- Komponentbaserat
- Mycket anpassningsbart, t.ex. med andra ramverk / bibliotek

React

React

A JavaScript library for building user interfaces

Get Started

Take the Tutorial >

Declarative

React makes it painless to create interactive UIs. Design simple views for each state in your application, and React will efficiently update and render just the right components when your data changes.

Declarative views make your code more

Component-Based

Build encapsulated components that manage their own state, then compose them to make complex UIs.

Since component logic is written in JavaScript instead of templates, you can easily pass rich data through your app and keep state out of the DOM.

Learn Once, Write Anywhere

We don't make assumptions about the rest of your technology stack, so you can develop new features in React without rewriting existing code.

React can also render on the server using Node and power mobile apps using [React Native](#).

React

- Ett JavaScript-ramverk för att bygga grafiska gränssnitt
- Fokuserar på " View" -lagret (man pratat ofta om **MVC**)
- Har ett stort ekosystem av komponenter

Fördelar

- Snabbt
- Reaktivt
- JavaScript-drivet
- JSX
- Virtuellt DOM
- Komponentbaserat
- Bra för stora projekt
- Syskon med React Native
- Mycket stort ekosystem

56         <div className="form-inline">
57           <label htmlFor="new-movie" className="mb-2 mr-sm-2">Lägg till film</label>
58           <input type="text" className="form-control mb-2 mr-sm-2" id="newMovie" onChange={this.updateInput} />
59           <input type="button" className="btn btn-success mb-2 mr-sm-2" value="Lägg till" onClick={this.addMovie} />
60         </div>
61
62         <hr />
63
64         <h2>Filmer att se</h2>
65         {this.state.movies.map(movie => <Movie title={movie} key={movie} />)}
66       </div>
67     );
68   }
69 }
70
71 ReactDOM.render(<MovieList />, document.getElementById('root'));
```

React

Att arbeta med react ”på riktigt”

Att komma igång...

1. Installera NPM: <https://www.npmjs.com/get-npm>
2. Installera ett paket som skapar ett react-projekt
 - `npm install -g create-react-app`
3. Skapa ett projekt
 - `create-react-app my-app`
4. Navigera in till projekt-mappen
 - `cd my-app`
5. Starta en utveckling-server (miljön)
 - `npm start`

Så här kan det se ut...

```
Windows PowerShell
PS C:\Projects\React> create-react-app my-app

Creating a new React app in C:\Projects\React\my-app.

Success! Created my-app at C:\Projects\React\my-app
Inside that directory, you can run several commands:

  npm start
    Starts the development server.

  npm run build
    Bundles the app into static files for production.

  npm test
    Starts the test runner.

  npm run eject
    Removes this tool and copies build dependencies, configuration files
    and scripts into the app directory. If you do this, you can't go back!

We suggest that you begin by typing:

  cd my-app
  npm start

Happy hacking!
PS C:\Projects\React>
```
